

Evidence sheet

What this tool claims, and how to check every word of it · SIH 2026 · PS 26183 · Ministry of Home Affairs / I4C

THE CLAIM

From one victim-reported wallet, FineX names the **customer deposit address** at the exchange that received the money — the account that can be restrained — and states whether the money is still reachable.

WHAT ONE CASE PRODUCES

- **A disposition.** CRITICAL (funds still at rest), SUSPICIOUS (a freezable exit named), or CLOSED (mixer or sanctioned — nothing follows).
- **The exit.** The deposit address, with its confidence and the tier of evidence behind it.
- **The reasons.** Six behavioural rules, each stating in plain words why it fired.
- **The file.** An evidence packet carrying the SHA-256 of every chain response, and a draft restraint request.

THE DATASET — DERIVED, NOT LICENSED

- **The rule.** An address that sweeps into one tagged exchange wallet at least twice, forwarding 90% or more of everything it receives, is a customer deposit address at that exchange.
- **The result.** 241 deposit addresses across 10 exchanges, from 15 explorer-tagged seed wallets, plus 202 OFAC-sanctioned TRON addresses — 458 labels in all.
- **The cost.** ₹0 in commercial data licences. Public endpoints and the published sanctions list only.

HOW TO CHECK US

- **Re-read from the chain.** An independent verifier re-reads every transaction a case rests on, importing nothing from the tracer: 33 confirmed, 0 mismatched, 0 missing.
- **Re-test the clustering.** 40 derived addresses sampled and re-read; all 31 that could be read still meet the rule.
- **Read confidence correctly.** It measures how much sweep evidence was seen — not the probability the attribution is right.
- **Ownership.** Only the exchange can confirm who holds an account. The packet says so in writing.

SCOPE, STATED PLAINLY

- **TRON and USDT only.** Cross-chain tracing, NCRP/SAHYOG intake and departmental indexing are designed and next — not claimed as built.
- **No model decides anything.** No machine-learning model and no language model runs in this system at all.

OPEN IT

crypto-fraud-tracer.onrender.com

A working deployment, not a mock-up.
Three recorded cases open straight from the front page.

THE NUMBERS

241	deposit addresses
10	exchanges covered
15	public seed wallets
202	sanctioned addresses
6	behavioural rules
10	cases frozen with hashes
1	added dependency
₹0	licence cost

Every figure is counted from the committed repository.

Standing limitation. Attribution produced here is an investigative lead carrying a stated confidence and a stated evidence tier. It is not, on its own, grounds for freezing an account — every evidence packet says so on the page an officer would file.
